The problems of educational assessment levels of formation competences of students studying in continuing professional education. The developed mathematical tools to determine dependence of the probability achieving the necessary level of training conditional on time, in order to use the data obtained in the selection, construction and selection of content learning technologies, as well as to create a personalized environment (person-centered), the trajectory of students at various levels of vocational education. If you are using mathematical tools necessary to take into account: the state of training (the sum of acquired knowledge, expressed in credits), while studying the discipline, the intensity of the flow of educational material or forgetting (part of the knowledge, skills and abilities lost per unit of time), or the intensity of the absorption process (part of the knowledge and skills assimilated per unit time).

## **ИНФОРМАЦИОННАЯ КОМПЕТЕНЦИЯ ИННОВАЦИОННОГО СПЕЦИАЛИСТА: ОТ ЧИТАТЕЛЬСКОЙ АКТИВНОСТИ К ПРОФЕССИОНАЛЬНОЙ КВАЛИФИКАЦИИ**

**Абубакирова М.И., Вербицкая Н.О.**

ФГБОУ ВПО «Уральский государственный лесотехнический университет», Екатеринбург, Россия

Innovation education today is intended to prepare specialists for the innovation sphere of economy. Such specialists must have a set of professional competencies. Federal Standards of Higher Education contain the model of competencies of high school graduates. This competencies in theory agree with the employers requirements. But in practice it is not. By results of some researches Russian specialists are uncompetitive in comparison with foreign graduates. One of the base competence (practically in all branch of knowledge) is informational. By the statistics data subscription by the resources of publishing company Elsevier the main Russian universities read approximately 10-12 thousands full-text articles. The main European universities on the same period of time read 80-100 thousands articles. This is the key problem. Innovative specialist is oriented to the rapid search and analyses of new knowledge. For this type of future professional activity students not only need skills of information searching but also must raise inside of mind this need state.

## **INFORMATION COMPETENTS OF INNOVATION SPECIALIST: FROM READERS' ACTIVITY TO PROFESSIONAL QUALIFICATION**
